Profile

Specializing in data engineering and AI industrialization, with hands-on experience delivering 3+ end-to-end ETL/ELT pipelines and Big Data/cloud architectures across Azure and GCP, including multi-source data integration, automated processing, and analytical data platforms serving 10+ simultaneous clients.

Professional Experience

Data Engineer & AI (Internship)

Inetum, Casablanca March – August 2026

- Designed a Medallion Architecture (Bronze/Silver/Gold) on Microsoft Fabric to industrialize ServiceNow data processing: ingestion into Lakehouse/OneLake, PySpark/Python transformations, and quality controls across ~40 business variables.
- Designed a star schema and developed data pipelines as well as Power BI/DAX dashboards, including SLA calculations, anomaly detection, and automated alerts via Microsoft Teams.
- Developed a RAG platform for structured and unstructured data, integrating ingestion, cleaning, chunking, hybrid FAISS/BM25 search, and language models; deployed using Docker and AWS EC2.
- Technologies:** Python, Microsoft Fabric, SQL, Airflow, PostgreSQL, AWS Ec2, Docker, Lakehouse

Data Engineer (Internship)

Akkan Crowdfunding, Casablanca July – Sept 2025

- Deployed a Big Data infrastructure consolidating funding data from more than 10 simultaneous clients.
- Implemented an ETL pipeline feeding an analytical Data Warehouse for decision-making purposes.
- Designed a multi-tenant architecture providing each client with dedicated data warehouses and customized dashboards.
- Technologies:** Python, Apache Spark, Airflow, SQL Server, ClickHouse, Power BI, Azure VM

BI Engineer (Internship)

Everest Indus, Remote July – Aug 2024

- Developed pipelines for extracting, transforming, and cleaning raw data for Power BI.
- Modeled data structures using star schema to monitor more than 5 critical performance indicators.
- Created interactive dashboards with DAX measures to help management interpret data and make decisions.
- Technologies:** Power BI, Data Modeling, DAX

Technical Projects

Real-Time Financial Market Monitoring and Prediction

- Designed an event-driven cloud architecture for real-time market data ingestion and streaming.
- Implemented a multi-zone Data Lake and serverless visualization system for live market monitoring.
- Generated buy, sell, or hold signals from newly formed candles to support trading decisions.
- Technologies:** GCP Pub/Sub, Cloud Run, FastAPI, Streamlit, Python, ETL

Automated Vehicle Price Analysis in the Automotive Market

- Designed an end-to-end Airflow-orchestrated ETL pipeline for multi-source automotive data.
- Automated web scraping and incremental data ingestion using Selenium.
- Developed a price prediction model to estimate future prices and identify vehicles with stronger resale potential.
- Technologies:** Python, Airflow, Selenium, Machine Learning

Technical Skills

Data Engineering: Apache Airflow, Apache Spark, Kafka, Databricks, Microsoft Fabric, web scraping (Selenium)

Storage & Modeling: PostgreSQL, MySQL, SQL Server, MongoDB, Snowflake, BigQuery, Data Warehouse/ Lake

Cloud & DevOps: GCP, Azure, AWS, Docker, Git

Visualization & BI: Power BI, DAX, Streamlit

Languages: Python, SQL

Education

Information Systems & Big Data Engineering

ENSA Berrechid

Sept 2021 – June 2026 State Engineering

Degree (Bac+5) — equivalent to a Master's degree

Certifications & Leadership

Certifications:

Microsoft Fabric Data Engineer Associate

Azure, August 2026

Associate Data Engineer in SQL

DataCamp, July 2025

Leadership:

Cloud Leader - Google Developer Club ENSA

Sept 2024 – July 2025

AI Leader - DevMinds Community

July – Oct 2025

Languages

English (C1) | French (C1)
